

DMH

The DMH 2500 stretches the boundaries of possibility

World premiere at the trade fair in Hannover! With the DMH 2500 gasket lathe, the Austrian company sets new standards for maximum diameter with up to 2540mm.

DMH Dichtungs- und Maschinenhandels GmbH is known for its unique sealing system and products in the fields of machines, components and tools. It is one of the world market leaders in the field of sealing technology. The plan to develop the DMH 2500 was born out of a desire to keep pace with ever-changing industrial requirements through innovation. Under the slogan "BIG. BIGGER. THE BIGGEST." the company's enormous know-how was pooled to make the claim of pushing the limits of what is possible to the top a reality.

And the revolutionary result fully lives up to this claim. The DMH 2500 not only takes maximum diameter to a new level, it also inspires with precision down to the smallest detail. The machine, in which the material is clamped vertically, impresses with a particularly

stable and space-saving design.

The principle that DMH machines are always adapted to the needs of the customer, always innovatively and individually designed and implemented, also comes into its own with the DMH 2500. In the case of this machine, the target group primarily includes companies that manufacture seals for the hydropower, mining, wind power, and heavy hydraulics sectors, because in these areas in particular the requirements for large seals are constantly increasing and the profiles are becoming more and more complex.

With the DMH 2500, any standard and special profile can be efficiently machined using the proven DMH software. One outstanding feature is the excellent positioning capability. For drilling and milling on gaskets, positioning can be done exactly to degrees. The scope of delivery when purchasing one of these innovative machines includes software, basic tooling, clamping system and suction system. The DMH 2500 can be equipped with

driven tools as required.

With the DMH 2500, a gasket lathe was presented at the Hannover Fair that can rightly be called the "crowning glory" in the sector of large gasket production, making the production of such formats feasible for the first time for the broad mass of customers.

With the DMH 2500, DMH Dichtungs- und Maschinenhandels GmbH has pushed the limits of what is possible. However, research work at this leading company in the sealing technology sector will continue intensively in order to be able to realize the sealing technology of the future for customers worldwide today and to keep redefining the limits of what is feasible and to push them even higher in the future.
